

## Supporting the LDA Collaborative – Health Inequalities

The LDA Health Inequalities Group has an ambitious programme of work informed by the learning from LeDeR reviews and split into 5 key areas:

- Population Health
- LD Health Checks & Access to Primary Care
- Staying Healthy and Well
- Adult Screening
- STOMP/STAMP

As members of the Joint HOSC, the LDA Collaborative is seeking your support to further increase engagement with the Health Inequalities leaders and Health Equity Champions across the system.

### Health Inequalities in LLR:

- We know that there are considerable health inequalities for local people with a learning disability and autistic people across LLR.
- Our learning from deaths reports tell us that if you live in LLR with a LD, your life will be up to 25 years shorter than other people in LLR.
- We believe that there could be even greater inequalities for individuals from different communities and we have more work to do to understand and address inequalities in our services.
