

LLR Immunisation Programme Campaign Update:

Health Overview & Scrutiny Committee

September 2024

National Vaccination Strategy

Published December 2023: NHS Vaccination Strategy

The strategy aims to:

- Build on the success of the NHS COVID-19 vaccination programme
- 2. Increase overall uptake and coverage of vaccinations (life-course, seasonal programmes and outbreaks)
- 3. Reduce disparity in uptake, so that every community in the country has the protection it needs.

Delegation of commissioning responsibilities to ICB, delayed until April 2026

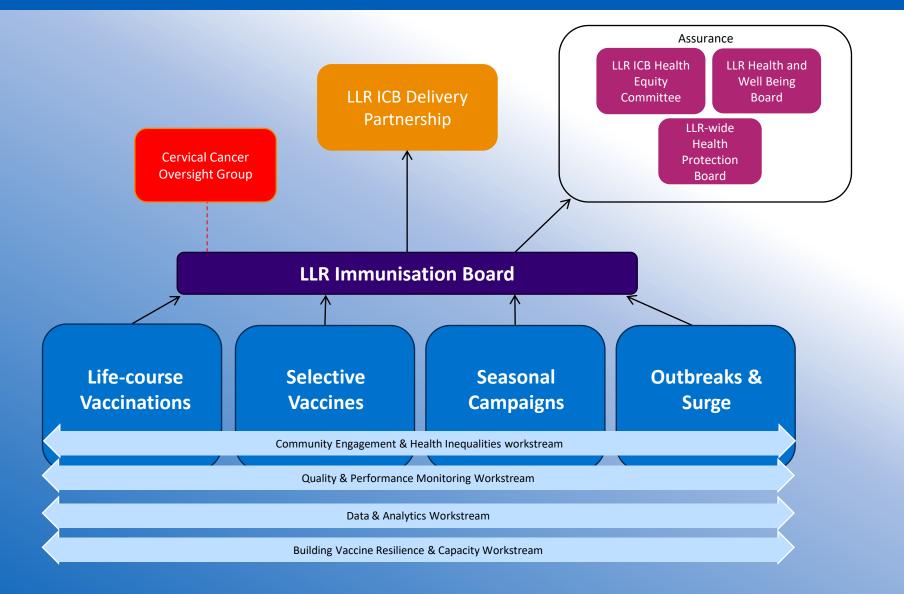

LLR Immunisation Priorities

Priority	Progress @ August 2024
1. Deliver National Vaccination Strategy	New local governance structure now up and running Delegation moved to April 2026. New governance being established by NHSE to manage transition Working with NHSE colleagues to agree a transition plan specific for LLR.
2. Tackle Health Inequalities	Undertaking procurement exercise with NHS England to secure access and inequalities funding for the remainder of this year
3. Improve Maternity, Childhood & Adolescent vaccine uptake	 Childhood immunisation one of three priority areas for CQC Improvement focus: Improving Maternity, Childhood and Adolescent Immunisation Group, feeds intelligence to the General Practice Assurance & Improvement Group Practices with large waiting lists identified, individual meetings being held with support for primary care: new CHIS provider, super vaccinators, promotional material, RHU over the summer to provide additional capacity Self-assessment improvement tool for childhood immunisation available for practices HPV Project Group set up to improve uptake – part of cervical cancer elimination strategy
4. Implement Covid-19, Flu & other seasonal vaccines	Achieved 55.5% uptake in Spring / Summer campaign. Plans progressing to start AW24/5 campaign in October 2024.
5. Respond effectively in surge & outbreaks	Measles Incident Management Team now stood down. Pertussis Incident Management Team, Chaired by County Director of Public Health established to monitor cases and agree mitigation plans.
6. Roll out new vaccines	RSV plans developing ready for 1 st September - hybrid delivery model for pregnant women. Primary care plus Roving Healthcare Unit for older adults (and available for pregnant women is required).

May 21 2024

LLR Immunisation Governance Structure

Procurement of 'Health Inequalities Hub' provider

- Current services include Roving Healthcare Units, Central Booking Team, Super Vaccinators, Vaccine Management
- Aim is to procure long-term service from April 2025 for 3-5 years
- Our vision is to create an integrated prevention service that offers a flexible and adaptable approach with the primary aim of
 increasing immunisation coverage but also supporting wider health promotion priorities for the LLR population. To include:
 - Outreach services that offer vaccination in convenient locations such as shopping centres, supermarkets and community locations.
 - Delivery of targeted interventions for underserved populations, using innovative approaches that enable people to make
 informed decisions about vaccination.
 - Provide **multiple vaccinations for the whole family** i.e. covid and flu alongside opportunistic HPV or childhood vaccines like MMR and Pertussis.
 - Include a wider service offer of health promotion and other services (i.e. screening services), to make every contact count.
 - Deliver vaccines in patient's homes (including care homes) where it isn't possible for the patient's GP to do so.
 - Able to step-up and be innovative, by testing, creating and delivering interventions that improve access to vaccination and other prevention services.
- Vision has been developed with System partners feedback and views are very welcome!

COVID-19, Flu & RSV

23

COVID-19 & flu vaccination uptake AW 2023/24: Closing figures

LLR AW 2022/23 COVID-19 closing uptake: 61.3%

Location / COVID-19	Booster eligible population	Booster doses given to eligible population	% Booster doses given
LLR	398,742	219,612	52.0%
Rutland	17,214	12,026	66.5%
City	121,072	46,263	36.6%
County	260,432	151,772	58.3%

LLR AW 2022/23 Flu closing uptake: 53.4%

Location / Flu	Booster eligible population	Booster doses given to eligible population	% Booster doses given
LLR	650,431	325,964	50.1%
Rutland	25,126	16,596	66.1%
City	225,548	87,449	38.8%
County	399,730	221,918	56.5%

COVID-19 Seasonal Vaccination Campaign: Autumn/Winter 2024/25

Cohorts for COVID-19 from 3rd October to 20th December 2024*:

- adults aged 65 years and over
- residents in a care home for older adults & their staff
- individuals aged 6 months to 64 years in a clinical risk group (<u>as defined in tables 3 or 4 in the COVID-19 chapter of the Green Book</u>). Pregnant women are included in the clinical risk group
- Frontline health & social care professionals.

*Outreach activities to continue to be delivered to underserved communities until 31st January 2025

National Booking Service (NBS) will go live for patients from 23rd September. Last NBS appointment date will be 20th December for both flu & COVID-19.

Vaccinations available from: Most GPs and community pharmacists, Roving Healthcare Units, Leicester Royal Infirmary (LRI) & Leicester General Hospital (LGH)

NHSE letter on the A/W 2024/25 seasonal vaccination programmes

Flu Seasonal Campaign 2024/25

Cohorts for flu from 1st September 2024 to 31st March 2025:

- pregnant women
- children aged 2 or 3 on 31st August
- primary school aged children (reception to year 6) via SAIS from 23 Sept to 13 Dec
- secondary school aged children (years 7 to 11) via SAIS from 23 Sept to 13 Dec
- all children in clinical risk groups aged from 6 months to less than 18 years

NHSE letter on the A/W 2024/25 seasonal vaccination programmes

Cohorts for flu from 3rd October 2024 to 31st March 2025:

- adults aged 65 years and over
- adults aged 18 years to under 65 years in clinical risk groups (as defined by the Green Book, Influenza Chapter 19)
- residents in long-stay residential care homes
- carers in receipt of carer's allowance, or those who are the main carer of an elderly or disabled person
- close contacts of immunocompromised individuals
- frontline health and social care workers

Vaccinations available from:

Some GPs and community pharmacists, LRI & LGH and from roving vaccination units (no appointment necessary)

NBS open for patients from 23rd September. Last NBS appointment date will be 20th December for both flu & COVID-19.

Respiratory Syncytial Virus (RSV) Vaccination Campaign

RSV campaign timings:

- From 1st September to 31st August for older adults
- Continuous for pregnant women from 1st September

Cohorts for RSV:

- Pregnant women from 28 weeks of pregnancy to birth
- Older adults aged 75 to 79 years

Vaccination availability:

- Pregnant women: LRI & LGH antenatal clinics and their own GP
- Older adults: from their own GP
- RSV to be offered as walk-in vaccination from roving healthcare unit location details to be confirmed

LRI & LGH:

Monday to Friday from 9am to 5pm outside antenatal dept

Community hospital locations from 1st Oct (TO BE CONFIRMED)

- Week 1: Coalville on Monday; Melton on Thursday & Hinckley on Friday
- Week 2: Loughborough on Tuesday & St Lukes (Harborough) on Thursday

Co-administration of RSV vaccine with other adult vaccines, including flu, COVID, pneumococcal, Tdap & shingles is allowed & acceptable.

NHSE letter on the A/W 2024/25 seasonal vaccination programmes

MMR & Measles

MMR / Measles Update

(Source: UKHSA 05/08/2024)

Data from 1 Sep	otember to 5	August 2024
		- 0

Location	Confirmed Measles Cases	Probable Measles Cases	Total Confirmed Cases
LLR	138	28	166
Rutland	1	0	1
City	128	22	147
County	11	6	17

Varicella

Confirmation that MMR is planned to change to MMRV from autumn 2025 but spending review awaited before final sign-off.

Unclear whether MMR will still exist beyond introduction of MMRV.

Unclear whether change to 12/12 and 18/12 timeline will be introduced alongside new vaccine.

ISO Week (date of onset on HPZone) from week 33, 2023 to week 32, 2024

MMR Data from Cover Report Jan to March

Location	24 Month MMR 1	5 Years MMR 2
Rutland	94.6%	94.4%
City	86.3%	79.9%
County	94.8%	91.9%

No new confirmed measles cases in LLR since 5 August

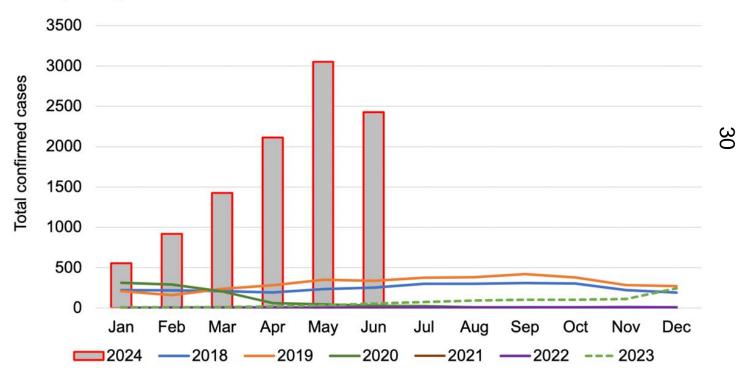

Pertussis

Pertussis: Confirmed Cases

Confirmed cases of pertussis in England by month, to end May 2024. In England, provisionally there were 7,599 laboratory confirmed cases of pertussis reported to the UK Health Security Agency (UKHSA) between January and May 2024 with 555 cases in January 2024 increasing to 2,591 in May.

This compares with 858 (provisional) laboratory confirmed cases of pertussis reported throughout 2023. There have been 9 reported deaths in infants who developed pertussis between January and June 2024.

Figure 1. Laboratory confirmed cases of pertussis by month in England: 2018 to June 2024 (note 1)

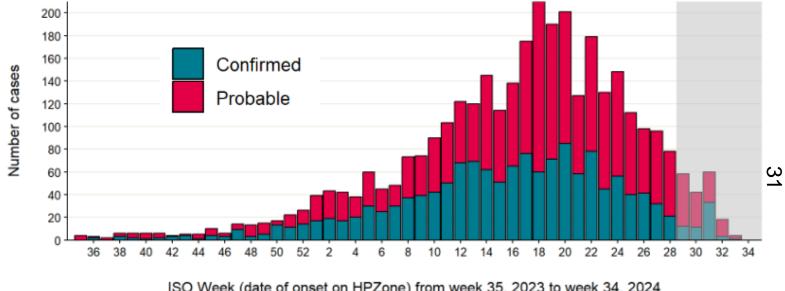

Pertussis: Confirmed Cases

Cases from 1st Oct 2023 to 22nd August 2024

Area	Confirmed	Suspected
City	38	74
County	180	218
Rutland	3	13

(Source: UKHSA 24/08/2024)

Trend of cases of **pertussis** being reported to UKHSA in the East Midlands is stable & more recent cases are in the older age group categories i.e. 15 years & over.

ISO Week (date of onset on HPZone) from week 35, 2023 to week 34, 2024

n = 3390

21/09/2024	Haymarket, Humberstone Gate (outside Primark)	10am to 4pm

NOTE

- Pertussis & MMR vaccinations currently available
- Flu & RSV vaccinations available from 1st September 2024.
- COVID-19 vaccinations to be offered from 3rd October 2024.

Approach to Addressing Childhood Vaccination & Immunisation

Activities to Improve LLR Childhood Vaccinations & Immunisation

Areas of focus	Activities	
Understand & define challenges related to vaccine uptake	 Working directly with GP practices with the lowest vaccination uptake to review current offer in order to improve vaccine uptake eg MMR Core 20, Super vaccinator capacity support, free use of roving vaccination units, bespoke CHIS support Working with GP practices with high vaccination uptake to capture learnings to adapt & scale Engaging system partners to agree local vaccination targets, eg HPV strategy & implementation 	
Identification of specific target audiences	 Providing accessible vaccinations to particular communities, eg Leicester Mammas baby cafes, pop-up vaccination clinic within a city mosque; working with CVSE groups & system partners to provide a complementary offers eg Turning Point & fibro scanning; BIMA health & wellbeing events Progressing procurement of health inequalities hub provider 	35
Use behavioural insights & data to design & deliver solutions	 Addressing group-specific barriers to vaccine take-up, expanding the range of opportunistic vaccinations available from the roving units Provision of free transport to enable patients access vaccination offers 	
Reviewing & evaluating existing patient pathways & touchpoints to identify potential solutions	 Evaluating existing vaccination data sources / recording to identify potential gaps & barriers Agreeing system-wide data sources to use as a barometer to measure outputs Ongoing review of issues & challenges Development of local walk-in vaccination finder to replace national booking system, as well as promotion of other vaccination clinics 	
Comms & engagement	 Providing regular bespoke training and updates for health and social care professionals & associated contacts, eg adult social care, community care providers Co-designing comms & engagement materials/channels with delivery partners & influencers eg HPV survey being developed with education leads; MMR & autism leaflet with midwives Continual monitoring & reviewing of outputs Instigating media opportunities to promote specific vaccination messaging 	

Human Papillomavirus (HPV) Vaccine

HPV Vaccination is recommended for:

- All adolescents (boys and girls) in school year 8 (usually aged 12 and 13 years)
- GBMSM up to and including 45 years of age attending specialist sexual health services and/or HIV clinics regardless of risk, sexual behaviour or disease status

Girls are eligible for vaccination up to their 25th birthday and boys in the eligible cohort (born after 1st Sept 2006) remain eligible to receive the vaccine until their 25th birthday. Boys born before 1st Sept 2006 have not been offered the vaccine as they are already benefitting from the indirect protection provided by the HPV vaccination programme.

GPs are required to provide HPV to eligible cohort (14 years to under 25 years), who missed SAIS vaccination offer.

Issues

- Sustained inequalities in uptake by area and minority ethnic groups
- Unmet information needs among young people in schools where vaccination uptake is low, with implications for obtaining consent and vaccination uptake

Actions

- Strategy developed and implementation plan being activated (forms part of wider LLR Cervical Cancer Elimination Strategy)
- Addressing young people's information needs
- Improving communication with parents
- Training and regular updates for all key health care and wellbeing professionals and education leads

HPV Uptake at 24 August 2024	(Source: CHIS 24/08/2024)
City	51.1%
County	77.9%
Rutland	83.9%
